

# Welcome to DartConnect Season Pass

1. From the **Welcome Screen**, DartConnect Members should **Check for Updates** in wifi before going to the match – the app will check for any league roster updates.

Note: DC will run without wifi, but may not have the latest league updates

2. Then select **League** play

3. If you do not see your league:

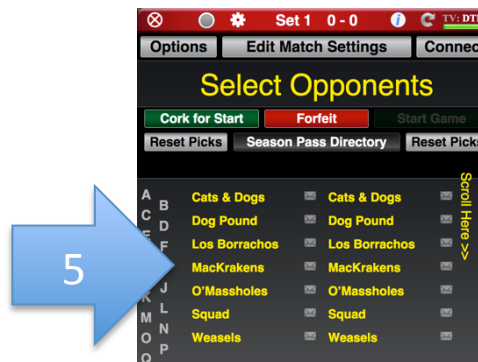

- Go back to the **Welcome Screen** and **Check for Updates** (need wifi)
- Your DartConnect **email** is different than the one your league is using
- Your league did not add your email to your **player record**

If you do not see your league in a red box, you can choose a generic option and add teams/players to your device library.  
**Option:** Access **“Edit Match Settings”** to format the match – this is normally set by your league and should be used only by experienced DC members.

If you accessed league play using the season pass button, your **Match Settings** are already set and the app will tell you when to save the match.

4. Select your first **game** of the evening and proceed to **Select Opponents**.

5. **Select the opponents for the evening**

If a team or player is missing, you can access **“Season Pass Directory”** to temporarily add them – make sure to notify your league to make them permanent
